Creating Smart Flows

You can create work flows using a bespoke set of actions, such as steps, transitions and links from the ribbon Home tab.

Prerequisites

- You have configured a [Design Abstraction](#) in Capital Project with the Type Smart Flow.
- You have created a design and assigned it the design abstraction which has the Type Smart Flow.

Note:

It is strongly recommended using the quick start data provided, which includes a project template for smart flow authoring, a style set which is essential to see the arrowheads on transitions, and icons/notations over steps where links or notes have been added to a step.

It is also strongly recommended you do not create multiple diagrams under the same Smart Flow design. You should always use one diagram in order for the Notes table to display appropriate information.

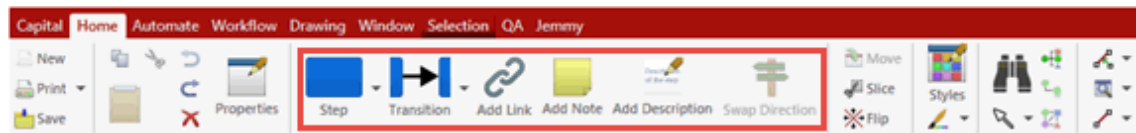

Procedure

1. Open the design.

Note the bespoke set of actions on the ribbon Home tab, the main Smart Flow actions include Step, Transition, Add Link and so on.

This is because the design abstraction Type is set to Smart Flow. See "[Using Design Abstractions to Control Ribbon Display](#)" for further information.

Figure 1. Smart Flow Ribbon

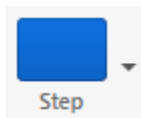

2. Create your work flow diagram using a combination of steps, transitions, and other actions from the ribbon. The available actions are:

- **- Add Flow Step.** Steps are used to represent a process, task, or choice block on your work flow diagram. These could include a design or technical publications task, or an input or output of information.

The recommended method for adding a step is to click the drop-down menu and choose to add a flow step from the symbol library. This assumes you have imported the quick start data (which contains some generic examples), or have created your own set of symbols for work flows. Select the required step from the Smart Flows Symbol library and double-click to place it on the diagram.

Alternatively you can click **Step** and draw your step directly onto your diagram.

Tip

Press R when placing the step to toggle its orientation.

- **Transition** - **Add Transition**. Click and drag to create transitions between the steps in your work flow. You can also click the drop-down menu and select **Auto-route Transition** to have the system automatically route the transitions between steps for you.

- **Add Link** - **Add Link**. This is used to establish links to other flow diagrams, local files, online tutorials, or websites. [Table 1](#) contains guidance for selecting the type of link to create, depending on whether you wish to link to Infohub topics or not. When you click on the action, the [Add Link Dialog Box](#) is displayed. Select the relevant radio button option for the link you wish to create and complete the required information.

Table 1. Choosing between Link Types

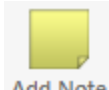

File Type	File Contains Links to InfoHub	Storage Location	Link Type	Comments
HTML	Yes	/doc/smartflow	Web	File will be referenced only. Copy docs folder action required. See "Creating Links to InfoHub Topics and HTML Files" for further information.
HTML	No	Not relevant	File	Will be part of smart flow package (no user action required). Copy docs folder action not required.

Once created, links are shown in a Links tab in the Design Browser window.

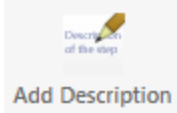

Click the  icon to open the link, be it a document, related flow, video file and so on. Click  to remove the link from your work flow diagram.

Note:

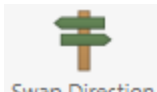

You can add multiple links to a single step. For example a single step could contain links to a lower level work flow, a web page, a PDF document containing further information and a short video illustrating the step details.

- **Add Note** - **Add Notes**. Select to add notes to steps on your work flow diagram. If you add more than one note, then they are sequentially numbered and appear as footnotes at the bottom of the diagram. When you click the action a dialog box opens that allows you to set an index number for the note as well as adding free text. Notes, once created, display in the Links tab.

- **Add Description** - **Add Description**. Select to add a description to the step on your work flow diagram. When you click the action a dialog box opens that allows you to add a free text description to the step - this is then displayed as a tooltip on the steps when viewed in a browser. Descriptions, once created, display in the Links tab.

- **Swap Direction** - **Swap Direction**. This action enables you to select a transition on your work flow diagram and change its direction between steps.
3. If required, add properties to the step by clicking the right mouse button and selecting **Properties**. These property values can be defined in a dictionary.
 4. Save the diagram - once you have constructed your work flow using the relevant combination of steps, transitions, and associated links.
 5. You can also save a combination of steps and transitions for re-use as pre-defined symbols in the Symbol library by selecting **Automate > Symbol > Save As Flow Symbol**.
 6. The completed work flow packet is now available for generation and consumption in Capital Publisher.

Adding a Link

You can add a link to an object in a diagram. The link can be to other diagrams, local files or websites.

Procedure

1. Select the object you want to add a link to. Press Space Bar and enter Link.
The [Add Link Dialog Box](#) displays.
2. Select either:
 - Flow
Select this to create a link to another diagram.
 - File
Select this to create a link to a PDF, HTML or MP4 file.
 - Web
Select this to create a link to a web page or InfoHub page.
3. Complete either the Flow, File or Address fields. For a description of how to complete the Address field for a link to an InfoHub page see "[Creating Links to InfoHub Topics and HTML Files](#)" in the *Capital Logic User Guide*.
4. Click **OK**.

Results

- The link is added to the object and to the [Links Tab](#).

Parent Topic: [Links, Footnotes and Descriptions](#)

Add Link Dialog Box

To access: Select the object you want to add a link to. Press Space Bar and enter Link.

Used to create links to other diagrams, local files or websites.

Objects

Table 1. Add Link Dialog Box Contents

Field	Description
Flow / File / Web	• Flow Select this to create a link to another diagram. • File Select this to create a link to a PDF, HTML or MP4 file. • Web Select this to create a link to a web page or InfoHub topic.
Title	Enter a title for the link you want to create.
Flow	<i>Only displayed when the Flow radio button is selected.</i> Click Find to display the Select Diagram dialog box. Select the required diagram in the tree and click Select .
File	<i>Only displayed when the File radio button is selected.</i> Enter the location of the PDF or HTML document, or video file (MP4 format only). Alternatively click Browse and navigate to the required file in the Browse File dialog box. Note: These files are pulled into the SmartFlow package on creation. Links from HTML files to the InfoHub will not work.
Address	<i>Only displayed when the Web radio button is selected.</i> For a link to a web page, enter the URL of the required web page. For a link to an InfoHub topic, follow the procedure in " Creating Links to InfoHub Topics and HTML Files " in the <i>Capital Logic User Guide</i> . Note: Links from HMTL files to the InfoHub will only work if the Copy Docs action is performed. See the Choosing Between Link Types table in " Creating Smart Flows " in the <i>Capital Logic User Guide</i> for further information.
OK	Click to create the link. <i>Disabled if either no value or an invalid value has been entered in the Flow, File or Address field.</i>

Adding a Footnote

You can add a footnote to an object in a diagram.

Procedure

1. Select the object you want to add a footnote to. Press Space Bar and enter Footnote.

The [Add Footnote Dialog Box](#) displays.

2. Enter an Index for the footnote.
3. Enter the footnote text in the Footnote field.
4. Click **OK**.

Results

- The footnote is added to the object and to the [Links Tab](#).

Parent Topic: [Links, Footnotes and Descriptions](#)

Add Footnote Dialog Box

To access: Select the object you want to add a footnote to. Press Space Bar and enter Footnote.

Used to add a footnote to an object.

Objects

Table 1. Add Footnote Dialog Box Contents

Field	Description
Index	The index of the footnote. The index represents an ID for the footnote.
Footnote	The footnote text.
OK	Click to create the footnote. <i>Disabled if no value has been entered in either the Index field or the Footnote field.</i>

Parent Topic: [Embellishing Diagrams Dialog and Field Reference](#)

Edit Footnote Dialog Box

To access: Click the **Click here to edit the footnote** () button next to a footnote in the [Links Tab](#).

Used to edit a footnote that has been added to an object.

Objects

Table 1. Edit Footnote Dialog Box Contents

Field	Description
Index	The index of the footnote. The index represents an ID for the footnote.
Footnote	The footnote text.
OK	Click to save the footnote. <i>Disabled if the contents of the Index field match the index of another footnote that has been added to the object. Also disabled if the text in the Footnote field has not changed.</i>

Parent Topic: [Embellishing Diagrams Dialog and Field Reference](#)

Adding a Description

You can add a description to an object in a Smart Flows diagram.

Procedure

1. Select the object you want to add a description to. Press Space Bar and enter Description.

The [Add Description Dialog Box](#) displays.

2. Enter the description text in the Description field.
3. Click **OK**.

Results

- The description is added to the object and to the [Links Tab](#).

Parent Topic: [Links, Footnotes and Descriptions](#)

Add Description Dialog Box

To access: Select the object you want to add a description to. Press Space Bar and enter Description.

Used to add a description to an object in a Smart Flows diagram.

Objects

Table 1. Add Description Dialog Box Contents

Field	Description
Description	The description text.
OK	Click to create the description. <i>Disabled if no value has been entered in the Description field.</i>

Parent Topic: [Embellishing Diagrams Dialog and Field Reference](#)

Edit Description Dialog Box

To access: Click the **Click here to edit the description** () button next to a description in the [Links Tab](#).

Used to edit a description that has been added to an object in a Smart Flows diagram.

Objects

Table 1. Edit Description Dialog Box Contents

Field	Description
Description	The description text.
OK	Click to save the description. <i>Disabled if the text in the Description field has not changed.</i>

Parent Topic: [Embellishing Diagrams Dialog and Field Reference](#)

Links Tab

The Links Tab is located on the lower left side of the application window.

The Links tab contains the following:

- **Browser tree**

Lists links, footnotes and descriptions that have been added to objects in the current diagram:

- Click one of the **Click here to open the link** () buttons to open the adjacent link.
- Click one of the **Click here to edit the footnote** () buttons to display the [Edit Footnote Dialog Box](#) for the adjacent footnote.
- Click one of the **Click here to edit the description** () buttons to display the [Edit Description Dialog Box](#) for the adjacent description.
- Click one of the **Click here to remove the link** () buttons, **Click here to delete the footnote** () buttons or **Click here to delete the description** () buttons to delete the adjacent link, footnote or description.
